Product Manager | Technical Execution · APIs & Data Systems · Customer-Facing SaaS

SUMMARY

- Hands-on product manager with 2+ years driving B2B SaaS features end-to-end – gathering and structuring requirements, writing PRDs, user stories, and acceptance criteria, and following through from planning to launch to post-release review. Comfortable in the technical weeds: uses SQL directly on production data and maps how APIs, databases, and integrations actually behave before proposing a fix. Recently completed two self-directed case studies for a construction-fintech integration platform (Billing Readiness and Exception Autopilot), designing full workflows – rules, automation, and safety controls – and shipping them as live MVPs. Works closely with engineering, design, sales, and customer success to keep priorities aligned, with a proactive interest in emerging tech.

SKILLS

- Product Lifecycle:** Requirement Gathering, Roadmaps, PRDs, User Stories, Acceptance Criteria, Prioritization
- Technical:** APIs, Relational Databases, SQL, System Integrations & Sync Workflows
- Domain:** B2B SaaS & Digital Platform Product Development, Fintech / Operations Workflows, Multi-Stakeholder Requirement Management
- Research:** Market & Competitive Research, User Feedback Analysis, Product Performance Monitoring
- Analysis:** SQL, Funnel Analysis, Cohort Analysis, A/B Testing, Root-Cause Analysis
- Data & Reporting:** Power BI, Tableau, Metabase, Dashboarding, Stakeholder Reporting
- AI-Assisted Building:** Vibe Coding & Rapid Prototyping (Cursor, Copilot, Claude, Lovable)
- Collaboration:** Engineering, Design, Sales, Marketing, Customer Success
- Tools:** Jira, Figma, Notion

EXPERIENCE

Product Manager

May 2024 – Aug 2026

Phoenix Express | Product Analytics, Reporting

Sangli

- Owned the end-to-end roadmap for **5+** platform workflows – gathering and prioritizing requirements across stakeholders, then using SQL and Python to analyze **10,000+** operational records to decide what to build first.
- Built and maintained **5+** dashboards tracking **15+** KPIs, monitoring product health post-launch and translating raw data into actionable recommendations for engineering and business stakeholders.
- Wrote PRDs, user stories, and acceptance criteria precise enough for engineering to build directly from, partnering daily with **10+** cross-functional stakeholders to unblock dependencies through launch.
- Structured **10+** ambiguous product and operational issues into clear root-cause findings, going deep on system behavior before driving corrective actions with engineering.

Data Analyst Intern

Mar 2024 – May 2024

The Sparks Foundation | Requirements Gathering, Dashboarding, Reporting

- Gathered stakeholder requirements, built reporting pipelines and Power BI dashboards, and prepared structured documentation from raw operational data – reducing manual reporting effort by **40%** and improving data accuracy by **20%**.

PROJECTS

Exception Autopilot – Agave Product Case Study — Live MVP

2026

Integrations · Automation · Financial Operations

Independent Case Study

- Identified a recurring integration-operations problem in construction-fintech workflows, where teams repeatedly hand-resolved the same exception patterns across ERP and project-management systems (Procore, Autodesk, Sage Intacct-style).
- Designed an end-to-end workflow – exception detection → pattern & root-cause analysis → deterministic rule → historical replay → human approval → canary → autopilot → verification → audit – converting validated fixes into safe, reusable automation.
- Defined confidence, financial-risk, and rollback controls, plus metrics (automation rate, resolution success rate, mean time to resolution, false-automation rate) to keep automation accountable rather than a black box.

Billing Readiness – Agave Product Case Study — Live MVP

2026

Financial Workflows · Data Dependencies · B2B SaaS

Independent Case Study

- Identified a billing-readiness problem caused by fragmented contract, SOV, change-order, vendor, and ERP data that finance teams had to manually reconcile before billing a project.
- Designed a centralized workflow classifying projects as Ready / At Risk / Blocked, surfacing blockers with evidence and financial exposure, and guiding users through a resolve → revalidate loop before marking a project bill-ready.

EDUCATION

Jain College of Engineering & Technology, Hubballi

2020 – 2024

Bachelor of Technology in Computer Science

CERTIFICATIONS

- Product Management Fundamentals – Udemy | Agile & Scrum Fundamentals – Udemy | Product Analytics – Pendo.io | Data Science & Artificial Intelligence – Boston Institute of Analytics
